

Mi Lugar – Smart Parking Management for Hybrid Workforces

A smart parking pilot proposal designed to optimize capacity, reduce associate stress, and align with the realities of hybrid work.

Problem Statement

Insufficient Capacity

Parking supply falls significantly short of employee demand, creating daily friction.

Underutilization Through Fixed Allocation

Spaces assigned to individuals or projects sit empty while others circle the lot.

Peak Congestion Window

Bottlenecks concentrate between **8:30–10:00 AM**, disrupting the start of every workday.

Inequity & Disruption

First-come-first-serve creates unfairness and operational chaos with no systematic resolution.

Current State

150

Parking Slots
Total available supply

375

Associates Needing Parking
25% of 1,500 staff

2.5X

Associates per Slot
Deficit of 225 slots

Current Allocation Breakdown

Category	Slots
Reserved – Project Associates	100
Reserved – Top Learners	50
Unmet Demand	225

 Pain points include productivity loss, employee dissatisfaction, operational disruption, inequity, and environmental impact.

Stakeholders Impacted

Associates

Daily stress, perceived inequity, and growing dissatisfaction with the workplace experience.

Security Team

Ongoing burden of monitoring and managing unauthorized parking incidents.

Facilities & Admin Team

Constant firefighting to manage complaints, conflicts, and ad-hoc parking requests.

Brand Positioning

Negative perception of the workplace experience undermines talent attraction and retention.

Constraints & Considerations

1

No Room to Expand

Limited or no viable options to increase physical parking infrastructure.

2

Growing Office Presence

Associates returning to office continues to increase, intensifying demand pressure.

3

Solution Must Be Scalable

Any fix must be fair, cost-effective, and capable of scaling across the organization.

An abstract, high-contrast image of a metallic, liquid-like surface. The surface is dark, with bright highlights and deep shadows, creating a sense of depth and movement. The liquid appears to be flowing or dripping, with various ridges and valleys. The overall effect is one of sleek, modern technology.

Objective of Solution

Design and implement a smart parking system that:

Optimize Capacity

Make the most of every existing slot through intelligent, dynamic allocation.

Reduce Associate Stress

Eliminate the daily anxiety of uncertain parking through transparency and fairness.

Minimize Productivity Loss

Reclaim time lost to parking searches, conflicts, and late arrivals.

Align with Hybrid Work

Flex dynamically with the realities of hybrid schedules and variable office attendance.

App Concept – Mi Lugar

CORE FEATURES (MUST-HAVE)

01

Login & Registration

Collects employee data: vehicle info, contact details, carpooling preference, and learning points.

03

Slot Allocation Logic

100 slots → designated project associates; 50 slots → top learners with priority parking passes.

05

Dynamic Access After 11 AM

All slots open to all associates after 11 AM – maximizing utilization throughout the day.

02

Dual Views: User vs Admin

Tailored interfaces for associates managing their spot and admins overseeing the full lot.

04

Real-Time Dashboard

Live view of available vs. utilized slots, plus unauthorized parking alerts for security.

06

Check-In / Check-Out & Auto Passes

Associates update status when parked or leaving; priority passes auto-generated for top learners.

Good-to-Have Features

UPCOMING ENHANCEMENTS

→ Carpooling Feature

Connect associates traveling from similar areas to share rides and reduce individual parking demand.

→ Visual Intelligence

Camera or sensor-based auto-update of slot availability
– no manual check-in required.

→ GPS Integration

Notify associates of available slots as their car approaches the office, enabling seamless arrival.

Benefits

Efficiency

Reduced congestion and faster parking for every associate, every day.

Fairness

Transparent allocation with clear priority rules — no more first-come-first-serve chaos.

Sustainability

Encourages carpooling and reduces unnecessary vehicle emissions around the campus.

Employee Experience

Lower stress and improved satisfaction — parking becomes a perk, not a pain point.

Brand Value

A modern, tech-enabled workplace solution that signals investment in associate wellbeing.

Call to Action

We are ready to move from concept to reality. Here is how we get started:

1

Pilot with Synthetic Data

Run Mi Lugar with simulated data for 1,500 associates and 150 slots to validate the system.

2

Validate Allocation Logic

Confirm that slot assignment rules perform fairly and efficiently under real-world conditions.

3

Measure Productivity Gains

Track time saved, congestion reduction, and associate satisfaction scores post-launch.

4

Scale Across Offices

Roll out Mi Lugar organization-wide, adapting to each location's unique capacity and workforce.
